DETAILED ACTION

Claim Objections

The objections to claims 7 and 18, set forth in the prior Office action, mailed 06-04-2003, are withdrawn in response to Applicant's amendments filed 10-31-2003.

Allowable Subject Matter

Claims 2, 4, 5, 10, 12, 13, 15, 17 and 66 are maintained as objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 18 and 45-50 are allowed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 6- 9, 14 and 16 are maintained as rejected under 35 U.S.C. 102(b) as being anticipated by Larsen et al. (NAR, Vol 6, No. 4, April 1979).

Larsen et al. disclose administering an adenine analogue, Toyocamycin (TMC), to a murine cell line infected with the Friend virus, a murine retrovirus. They observe

Art Unit: 1635

that the virions had a loss of infectivity during TMC treatment (see for example abstract) and further observe that TMC was incorporated into the RNA of the virion and a significant amount of virion sequences is lost (see for example page 1554) and, therefore, would be considered mutated.

Therefore, Larsen et al. anticipates claims 1, 3, 6-9, 14 and 16.

Response to Arguments

Applicant's arguments filed 10-31-2003 have been fully considered but they are not persuasive.

In response to the rejection of record of claims 1, 3, 6-9, 14 and 16 under 35 USC 102(b) as anticipated by Larsen et al. Applicant argues that the

In response to the rejection of record of claims 1, 3, 6-9, 14 and 16 under 35 USC 102(b) as anticipated by Larsen et al. Applicant argues that the methods disclosed by Larsen et al. speculate that the incorporation of Toyocamycin into viral RNA could possibly result in a miscoded message, but that the same research group later recanted this speculative conclusion. To support this argument Applicant cites Hamelin et al., which concludes that incorporation of Toyocamycin does not result in an altered reading frame, but acts through some other mechanism yet to be fully illustrated. Applicant argues that Larsen et al. does not meet all of the limitations of the claimed invention because the methods of Larsen et al. do not actually increase the mutation rate of a virus.

Application/Control Number: 09/522,373

Art Unit: 1635

These arguments are not found to be persuasive because the methods disclosed by Larsen et al. comprise all of the methods steps of the instantly claimed methods and result in viral mRNA wherein Toyocamycin is incorporated into the RNA in place of adenosine and, therefore, all of the limitations of the claims are met. It is not clear from the results of Larsen et al. and Hamelin et al. that the mutation rate of the virus is not increased and, in fact, the observed incorporation of Toyocamycin in place of adenosine is a mutation. Additionally, in both of the references Larsen et al. and Hamelin et al., virally attributed RNAs migrating at unexpected positions on assay gels when cells were treated with Toyocamycin (see for example, page 490 of Hamelin et al.), which would be encompassed in the broad term of mutated sequences. Further, Larsen et al. use higher concentrations of Toyocamycin than Hamelin et al. (up to 1 µg/ml, whereas Hamelin et al only goes as high as 0.5 µm/ml). Hamelin et al. does not provide an alternative mechanism for the viral inhibition activity of Toyocamycin and it does not eliminate the possibility of mutations, but rather states that Toyocamycin does not result in an altered reading frame (as opposed to, for example, point mutations). In both Larsen et al. and Hamelin et al. the assessment of mRNA is based only on quantity and neither references assesses individual mutations, beyond the determination of the incorporation of Toyocamycin, which in itself is a mutation.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen A. Lacourciere whose telephone number is (571) 272-0759. The examiner can normally be reached on Monday-Thursday 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John L. LeGuyader can be reached on (571) 272-0760. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
